

Shipping fish

Materials:

Breather bags (Aquatic Arts, #B00J4Y3RM6 on amazon)

Styrofoam and cardboard box

Heat pads (Uniheat, #B06X95R1FN on amazon)

1. Arrange shipment in advance to ensure the fish will be picked up in time.
2. Place fish in a breather bag with water and enclose the bag (ideally one fish per bag, picture below).
3. Place all bags with fish in a Styrofoam box as it will insulate, and stuff the box to secure the bags with fish in place.
4. Poke holes in the lid to allow for gas exchange.
5. Tape the heating pad to the lid and secure the lid on the box. Once a heating pad is opened it will provide heat for a specified time. Select heating pad time as needed. For international shipping that takes more than 1 day, add more bags or bags that work for a longer duration.
6. Place the Styrofoam box into a shipping container/cardboard box. Secure the box so it does not open and place the shipping label onto the box.
