

Gliding table

Printing stringency: Low

Our condition

- Layer height: 0.1
- Infill: 20%
- Support: Yes for two parts: middle_bar & optional clear extension, No for the rest 7 parts
- 200 °C, with PLA

Features

- Gliding table with knobs on X-axis and Y-axis
- With an extension to be compatible with transmitted light below the sample
- Good for coupling with a simple microscope without a gliding table, avoiding unintentional sample rotation while manually moving the sample. Great for multiple image stitching.
